

**About
THE RLF ADVANTAGE**

RLF's highly specialised liquid fertiliser products

Engineered technology based around rapid uptake of nutrient for seed and leaf

Low pH technology

A clear difference from all other fertilisers on the market

Rapid utilisation of nutrient means rapid growth

A product for the world

Grant Borgward,
Farmer and RLF Manager

Grant Borgward talks about
THE RLF ADVANTAGE
Farmer and National Sales Manager for RLF

About this Series

An informative and insightful video series featuring Grant Borgward has been released for 2016.

It has been called FARMER TO FARMER with very good reason.

This series has been developed to enable farmers everywhere to draw knowledge and inspiration from a fellow farmer as well as to spread further the message of RLF products.

Grant Borgward talks about The RLF Advantage

A high performance range of fertilisers is based on low pH technology.

What does this mean ?

What it means is that the nutrients that were put into the drum, end up inside the leaf and inside the seed.

And that is what makes RLF products so clearly different to all other fertilisers on the market.

What's the significance of getting the nutrients into the leaf and inside the seed ?

The significance is that you get rapid utilisation of the nutrients that the farmer has just purchased. Once those nutrients are inside the plant, the plant then responds with a much larger root system, and much more rapid growth so it can utilise both the nutrients and the moisture available in the soil.

About Grant

Grant farms nearly 10,000 ha of mid-west land located southeast of Geraldton in Western Australia. A son of a farmer, Grant's been bought-up on farm all of his life. In professional life Grant is the National Sales Manager of RLF for the last 18 years.

RLF Products

Seed Priming	Ultra Foliar	Crop-Specific Foliar
