Soil management is easier to NPK granular fertilisers. Prevents nutrient loss and helps with plant nutrition when needed to buffer against the toxic effects of chemicals. Effects from herbicides, fungicides and pesticides are buffered. Stronger plants to resist disease and handling can be resisted. Environmental conditions are handled better as the HBS formulation means it is immediately dispersed when mixed in irrigation systems. As a result, it significantly increases crop quality, quantity and nutritional value. Increased yield as demonstrated by trials and grower experiences.

Based on science as its formulation is based on plant nutrient removal science which achieves a complete and optimum balance of essential nutrients. Matching of nutrients gives the ability to feed plants frequently and in managed doses. Precise method of application using irrigation systems.
