

SPRING HAS SPRUNG AND SO HAS THE VINEYARD

This Insight discusses optimising **vineyard** returns and the benefits received by using the industry benchmark RLF product for growing 'best quality' grapes **Viticulture Plus (VP)**.

By our Regional Correspondent

There is no question that the wine grape industry is going through a difficult and challenging phase.

Optimising vineyard returns now-a-days depends squarely on growing 'best quality', while controlling costs at a minimum level.

'Quality' is largely a product of nutrition practices and balance – and especially trace elements. **Viticulture Plus (VP)** has been a benchmark in the industry for several years now. Why? Because it performs!

An RLF **Viticulture Plus** program supplies all essential trace elements, plus 35% – 45% of the phosphorus requirements for an average yielding crop.

Why would you NOT take hold of this great OPPORTUNITY?
