

439% Return in 90 days for Pasture Plus

Amazing Return of Investment

"We applied "Pasture Plus" in early August 2014 to 40Ha of pasture that was sewn down with 50kgs / Ha of oats.

The "Pasture Plus" was applied at the rate of 2 litre per Ha.

We ran 45 heifers and steers from the time of spraying (early August) through to the end of October, on the "Pasture Plus" treated paddocks.

Normally at this time of the year, and on these paddocks, we average 1.2kg weight gain per day. Knowing that 2014 has been one of the driest years on record, we weighed the cattle off at the end of October and were absolutely delighted to see that the cattle had average 1.78kg weight gain per day. This is an increase of 48% over our previous average.

This is an amazing return for us. We invested \$28per Ha in the "Pasture Plus" foliar and spraying costs and in return, we earned an additional \$123 per Ha in just 3 months.

I must say that initially I was sceptical that the product would work. What I have seen since applying the "Pasture Plus" has amazed me. My father and I saw visible improvement in the crop within 4 days of spraying. I have seen huge root growth development, massive increase in yield and the quality of the feed, as we can see from the weight gain, has improved dramatically."
