Les, a new customer olive grower, had experienced crop losses the previous year and was confused by all the 'advice' he was receiving locally.

Les sought the advice of RLF Plant Physiologist Dr Hooshang Nassery, after asking for an introduction from our RLF regional distributor. The story tells us, that over a platter of Greek cheese and home-pickled olives, an RLF Foliar and Fertigation program designed to improve yields of quality fruit and oil was provided.

Les’s previous confusion now turned to optimism about the likely harvest outcome and that optimism was justified. Les’s harvest – and in a drought year as well – was around 75 tonne of fruit producing 14,000+ litres of a truly excellent oil.

All this from a well-managed 8ha with a well-considered RLF Foliar and Fertigation program.
