

RESULTS JUST TUR-RIFIC!

This Insight highlights the experience of an irrigated, 'Kikuyu' **turf** operator who used **Pasture Plus + Urea Foliar Tank Mix** to improve his crop's growth and quality.

By Ross Coleman

Growth and quality is now excellent – with increased new root growth that has significantly increased the volume of turf available to harvest. The power of good foliar.

This irrigated, 'Kikuyu' turf operator, in South Australia's Murraylands area was referred to me by a client.

They had trouble finding enough 'quality' turf to harvest for sale due to poor, patchy growth. With RLF Plant Physiologist Dr Hooshang Nassery's input, their irrigation and fertiliser practices were changed. Their new practice included integration of a weekly **Pasture Plus + Urea Foliar Tank Mix**.

A few weeks on the Grower's opening remark to me was : *"What has been happening here is just amazing"* – or (very Australian) words to that effect !!
