

IF THEY WANT RESULTS, GIVE THEM RESULTS....

This Insight details performance results for RLF **BSN and Foliar products** as reflected in the archives of its Australian operations and can be used as easy-access data when the questions are raised.

Over the years, performance results for our BSN and foliar products have steadily accumulated in the archives of our Western Australian, South Australian, New South Wales, Victorian and Queensland operations.

The project of re-documenting and cataloguing all of these results took months, and it has culminated in a wonderful archive of 'Fertiliser Integration Updates' – and is available to everyone. Its use is intended as easy-access data when someone raises the words, “....BUT, RESULTS?”

This impressive information source, containing hundreds of results – all catalogued by State and Crop-type, should demonstrate very clearly that there have been many farmers and growers before them having all asked the same question “....BUT, RESULTS?” and benefited from the cost-effective performance of RLF products.

We are proud to be upfront, and in the industry leading position of being able to put years and years of results on the table.

Our dedicated staff team is to be congratulated on putting together such a wonderful source of data and information. Countless hours of work by a number of team members express the exact same commitment RLF, collectively, has for its customers.
