

1 specific product with 12 essential nutrients

N Nitrogen	P Phosphorus	K Potassium	S Sulphur	Mg Magnesium	B Boron
Cu Copper	Fe Iron	Mn Manganese	Mo Molybdenum	Zn Zinc	Co Cobalt

Pasture Plus Max is a Crop-Specific Fertiliser with a nutrient delivery system (NDS) that increases the efficiency in product uptake through the leaf. It delivers 12 essential nutrients all contained within a High-analysis Broad-spectrum Solution (HBS). This nutrient package is formulated specifically for pasture.

Pasture Plus Max provides the plant with an optimum balance of essential nutrients to ensure soil nutrient variability impact on nutrient deficiency is fixed. It gives greater plant protection, more growth and improved yield qualities.

The Latest in Crop-focused Nutrition

Pasture Plus Max is designed specifically for pasture crops. This means that it will work better and provide greater results when applied to pasture crops. By using plant science RLF has engineered a special range of Ultra Foliar products that are the latest in crop-focused nutrition. **Pasture Plus Max** is one of these products and ensures the delivery of a specially formulated nutrient package that gives maximum benefit to pasture crops.

One litre of **Pasture Plus Max** per hectare supplies enough zinc, copper, manganese, and cobalt for one tonne of hay per hectare.

Gives the Plant the Resources to Grow Strong

Pasture Plus Max ensures that the NPK-inputs (nitrogen, phosphorus and potassium) - together with other farm practices such as herbicide and fungicide use - achieve maximum gain. **Pasture Plus Max** gives the plant the resources it needs to grow strong. The complete, specially formulated broad-spectrum nutrient package it delivers directly to the plant, supports the crop's growth and strength by ensuring that NPK fertilisers and other herbicides and fungicides are buffered during uptake.

Features and Benefits

Increased yield as consistently demonstrated by independent trials in Australia.

Reduced NPK costs as granular NPK use can be decreased as part of an integrated fertiliser program.

Improved quality and value as it significantly increases crop quality, quantity and nutritional value.

Safe transfer of nutrients as the load of 12 optimally balanced nutrients are delivered directly through the leaf.

Soil variability problems are fixed as nutrients are absorbed by leaves of every plant with no tie-up or antagonism that occurs when nutrients are absorbed from the soil.

Based on science as its formulation is based on plant nutrient removal.

Environmental conditions are handled better because it gives the plant more energy to deal with stresses associated with inadequate rainfall, changing weather patterns, variations in soil, pests and other external conditions.

Stronger plants to resist disease as plant and crop safety is ensured by investing greater strength to the plant so that infection from disease and handling can be resisted.

Effects from herbicides, fungicides and pesticides are buffered as it provides a substantial boost of nutrition when needed to buffer against the toxic effects of chemicals.

Improved NPK uptake as the agronomic efficiency of NPK fertilisers is increased by improving NPK mobility giving greater fertiliser effectiveness and less toxicity.
